

Why is MyPOS Connect the best replacement for Microsoft Dynamics RMS?

According to our customers, here are the top 8 reasons why MyPOS Connect is the best replacement for RMS.

1. Stronger Feature Set

With MyPOS Connect, you get the same reliable POS platform but with more functionality than RMS. Plus, we're releasing powerful new features all the time.

2. Easier to Deploy

MyPOS Connect is easier to deploy because you don't need network or database servers – just a Windows-based workstation or tablet and an internet connection. Also, we can convert your RMS database so that you won't have to waste time inputting your items and customers; and you won't lose any sales history.

3. Easier to Use

It's easier to learn and use than other POS solutions - even easier than RMS! If you're a multi-store retailer, you'll especially love the fact that you won't have to process Headquarters worksheets to share data with the stores anymore. Plus we've incorporated many of the same function key shortcuts in our POS app (e.g. F2 – Item Lookup, F7- Customer Look-up, F12 – Tender, etc.)

4. Less Expensive

There are no up-front software license fees or expensive servers required. Plus training costs are much lower than comparable solutions because it's so easy to learn how to use MyPOS Connect.

5. Automatic Software Updates

Remember how difficult it was to upgrade RMS? With MyPOS Connect, installing updates takes just one click. And because MyPOS Connect doesn't care if different devices have different versions, your stores can accept updates whenever it's convenient for them.

6. Protected by the IBM Cloud

Because MyPOS Connect hosts your database in the IBM Cloud, it's protected from power outages, natural disasters and even hackers. Plus your database is backed-up regularly so you never have to worry about losing data.

7. Automatic Offline Sales Processing

Worried about losing your connection to the Cloud? Each POS device has a local copy of the database so you can continue processing sales when you lose your connection to the Cloud. You won't even know you're not connected. When your connection is reinstated, all your offline transactions flow up to the Cloud, automatically.

8. You Can Use Existing Hardware

If your current workstations have either Windows 7, 8 or 10, you can install MyPOS Connect without any upgrades. It also works with the same POS peripherals that work with RMS.

If your annual software maintenance plan with Microsoft is coming up for renewal, it's a perfect time to consider upgrading to MyPOS Connect. With MyPOS Connect, you'll save money immediately and you'll be able to squeeze every ounce of profit from your retail operation.
